

Atılım University's 'One Book-One Topic Program' will continue with a new book in 2016-2017 academic year!

As in previous years, a university-wide book-nomination survey to obtain a list of books was conducted and a committee consisting of members representing all faculties and most administrative units chose the book by a well-known popular physicist **Michio Kaku** titled *Physics of the Future*. With his lucid style, Michio Kaku explains how science will shape human destiny and our daily lives by the year 2100 in layperson's terms. The main topic for discussion selected from the book is **Dreaming the Future**.

One interesting aspect of the book is that its translation to Turkish has been made by Associate Professors **Yasemin Saraç Oymak** and **Hüseyin Oymak** of our Physics Group. Its first reading and editing was completed by Assistant Professor **Baran Uslu** of our Electrical and Electronics Engineering Department.

The selected book of the year is studied in various courses in the University. Likewise, the students at the Department of Basic English are being introduced to the book. What is more, we have started preparations for an event on the topic “**Dreaming the Future**” to be presented to the whole campus!

You may find more information about the chosen book from the web page at <https://etpo.atilim.edu.tr/en/2016-2017-physics-of-the-future>.
